

Carnivore
an example of carnivores are
lions, tigers, eagles ,hawks,
sharks and frogs

Omnivores
Examples of
Omnivores are
black bears,
squirrels,
raccoons

Herbivores
examples of
herbivores are
deers, horses,
rabbits, cows,
bees,sheep and
grasshoppers.

photosynthesis

plants get energy from a process called

Photosynthesis. Through this process plants take water from the soil. This water goes to there leaves the leaves take carbon dioxide from the air into the plant.

**Producer
a producer
is a plant**

**consumer
a
consumer
is an animal**

**how do
animals get
energy**

**animals get energy
from plants**

**how do plants
get energy**
plants get energy
from a process called
photosynthesis
